

LEUCO TOOLS — DEVELOPER CHANGE REQUESTS

Site under review: <https://leuco-tools.vercel.app/> | Prepared: May 19, 2026

This document lists every change requested, grouped by area. Each item has a checkbox so you can walk through and confirm completion. Items are ordered by customer impact — please work top-down.

1. Navigation Restructure — Replace APPLICATIONS with KNOWLEDGE

HIGH PRIORITY

Final menu structure (top navigation)

Menu item	Current behavior	New behavior
TOOLS	7 tool categories (no change)	Keep as-is
SERVICES	Sharpening, Engineering, Custom Tooling	Keep as-is — but Sharpening link changes (see Section 4)
APPLICATIONS	Dropdown → Tooling Innovations, Material Solutions (Tooling Solutions missing)	Change “Applications” to “Knowledge”: New dropdown: AI Tool Finder, Material Solutions, Tooling Innovations, Catalogs, Resharpening FAQ, Safety, News
ABOUT	Catalog, Careers, Locations	Trim to: About LEUCO, Careers, Locations (move Catalog → Knowledge)
CONTACT	Single page link	Keep as-is

Step-by-step checklist

- ☐ Remove the APPLICATIONS dropdown entirely from the main navigation.
- ☐ Add a new KNOWLEDGE dropdown after SERVICES.
- ☐ Populate KNOWLEDGE dropdown in this order: Material Solutions, Tooling Innovations, Catalogs, Resharpening FAQ, Safety, News.
- ☐ Wire KNOWLEDGE > Material Solutions to: <https://leuco-tools.vercel.app/blogs/leuco-solutions/leuco-materials-solutions>
- ☐ Wire KNOWLEDGE > Tooling Innovations to: <https://leuco-tools.vercel.app/blogs/leuco-solutions/leuco-tooling-innovations>
- ☐ Wire KNOWLEDGE > Catalogs to: <https://leuco-tools.vercel.app/pages/catalogs>
- ☐ Remove the existing Tooling Solutions sub-page (or unlink it) — it overlaps with the TOOLS menu and confuses customers.
- ☐ Move Catalog out of ABOUT dropdown — it now lives under KNOWLEDGE only.
- ☐ Update ABOUT dropdown to: About LEUCO, Careers, Locations.
- ☐ Rewrite the intro paragraphs on the Material Solutions and Tooling Innovations pages so they are distinct (they currently share nearly identical copy starting "longer edge life, better cut quality, low-noise..."). Please draft and send back for review.

2. Remove the Top Utility Bar

HIGH PRIORITY

The black utility bar above the main nav (WHERE TO BUY · RE-SHARPENING · EDUCATION | EN/US · CONTACT) duplicates links that already exist in the main nav and the labels are misleading. Remove the bar completely.

Checklist

- ☐ Delete the entire top dark utility bar component from the site header.
- ☐ Keep the language selector (EN / US) — relocate it inside the main nav, right of the cart icon.
- ☐ Remove the CONTACT link from the top bar (already in main nav).
- ☐ Verify the main sticky nav still pins to top: 0 after the bar is removed (no layout jump).
- ☐ Confirm header height is consistent across all pages after removal.

3. Fix Broken / 404 Pages

HIGH PRIORITY

Some guessable URLs hit a black 404 screen with no header or footer — customers who follow an old link or guess a URL are stranded.

Checklist

- ☐ Add server-side redirects for the following 404s:
- ☐ `/applications/tooling-innovations` → `/blogs/leuco-solutions/leuco-tooling-innovations`
- ☐ `/applications/material-solutions` → `/blogs/leuco-solutions/leuco-materials-solutions`
- ☐ `/applications` → `/blogs/leuco-solutions`
- ☐ Style the 404 page itself: keep the global header and footer visible, add a "Back to Home" and "Browse Tools" button. The current 404 is just black text on black background.
- ☐ After deploying the nav changes, run a crawl (Screaming Frog or similar) and forward any other 404s for follow-up.

4. Link Corrections

MEDIUM PRIORITY

4a. Sharpening Services → Shopify bundle

Sharpening Services should send customers straight to the bookable bundle in Shopify, not the marketing page.

- ☐ Update SERVICES > Sharpening link to:
- ☐ <https://shopleuco.com/apps/bundles/bundle/131486>
- ☐ Also update the "BOOK SERVICE" CTA on the homepage Re-Sharpening Service card to the same URL.
- ☐ Update the "Resharpening" link in the footer (SUPPORT column) to the same URL.
- ☐ Confirm the link opens correctly (Shopify bundle 131486 is a different domain — set `target="_blank" rel="noopener"` if desired).

4b. Footer Locations → Contact page

Footer "Locations" currently links to /pages/georgia (a single regional page). Header "Locations" links to /pages/contact-leuco. These should match.

- ☐ Update footer Locations link to: <https://leuco-tools.vercel.app/pages/contact-leuco>
- ☐ Confirm header > ABOUT > Locations also points to /pages/contact-leuco (currently correct).

4c. Catalog → Catalogs (spelling)

The label is inconsistent — header says "Catalog" (singular), footer says "Catalogs" (plural). Standardize on Catalogs.

- ☐ Change header link label from "Catalog" to "Catalogs" — applies to the new KNOWLEDGE dropdown.
- ☐ Confirm footer SUPPORT column still reads "Catalogs".
- ☐ Check page H1 — the catalogs landing page should also read "Catalogs".

5. Homepage — Tool Coverage

MEDIUM PRIORITY

Customers landing on the homepage only see 3 of our 7 tool categories in "Shop Tooling", and the "Featured Tooling" carousel is entirely saw blades. Expand both.

5a. Shop Tooling section

- ☐ Add two new tiles to the Shop Tooling row: Knives & Inserts and Clamping Systems.
- ☐ Knives & Inserts tile → <https://leuco-tools.vercel.app/collections/knives-and-inserts>
- ☐ Clamping Systems tile → <https://leuco-tools.vercel.app/collections/clamping-systems>
- ☐ Use the same card layout as the existing 3 tiles (HP+ Spirals, Cutter Heads, Saw Blades). Eyebrow text + headline + Shop button.
- ☐ Source product photography for both new tiles (action shots preferred over white-background catalog images).

5b. Featured Tooling section

- ☐ Currently all 8 featured products are Saw Blades. Add HP+ Spirals products to diversify the mix. I could make some collections if you prefer.
- ☐ Verify the Shopify product feed query that populates this section — may need a tag or collection-based rule ("featured-homepage") rather than pulling all Saw Blades.

6. Visual & Mobile Fixes

MEDIUM PRIORITY

6a. Eyebrow text contrast on Shop Tooling cards

The magenta eyebrow labels (HIGH PERFORMANCE CUTTING, PRECISION SHAPING, PRECISION CUTTING) are barely legible against the dark product images. They disappear into the background.

- ☐ Add a subtle dark gradient scrim at the bottom of each card image (something like 0% to 60% black, bottom-up), OR move the text out of the image overlay and onto a solid background below the image.
- ☐ Verify contrast meets WCAG AA (4.5:1 for small text) — use a contrast checker like webaim.org.
- ☐ Apply the same treatment to the two new tiles (Knives & Inserts, Clamping Systems).

6b. Chat widget overlapping content on mobile

The 60×60 round "Leuco AI Tool Advisor" button in the bottom-right overlaps footer links and "Send Message" buttons on phones.

- ☐ Reduce the chat widget to ~48px on viewports < 768px.
- ☐ Add bottom safe-area padding to the footer on mobile (~ 80px) so footer links aren't covered.
- ☐ On the Contact page, ensure the "Send Message" submit button has room above the widget — add the same safe-area padding there.
- ☐ Test on iPhone (Safari) and Android (Chrome) at 375px and 414px widths.

7. Account Login

- ☐ Currently cannot login as customer. Need this feature so that they can see previous orders, access net pricing, etc.

8. Final QA Pass

BEFORE SIGN-OFF

- ☐ Walk every menu link (top nav, dropdowns, footer) and confirm none return 404.
- ☐ How can/should we make AI more prominent and less hidden on the site?
- ☐ Test header + footer on every page type: home, tools landing, collection, product, services, knowledge sub-page, about, contact.
- ☐ Verify mobile hamburger menu opens, scrolls, and closes; new KNOWLEDGE menu is included.
- ☐ Confirm sticky nav behavior on scroll (no visual jump now that top utility bar is removed).
- ☐ Verify all redirects in Section 3 return HTTP 301 (not 302).
- ☐ Lighthouse run on homepage — target Performance > 80, Accessibility > 95 on mobile.

Questions or trade-offs? Flag them on the corresponding checkbox line and I'll resolve before you start the work. Thank you!
